

Easypointer®

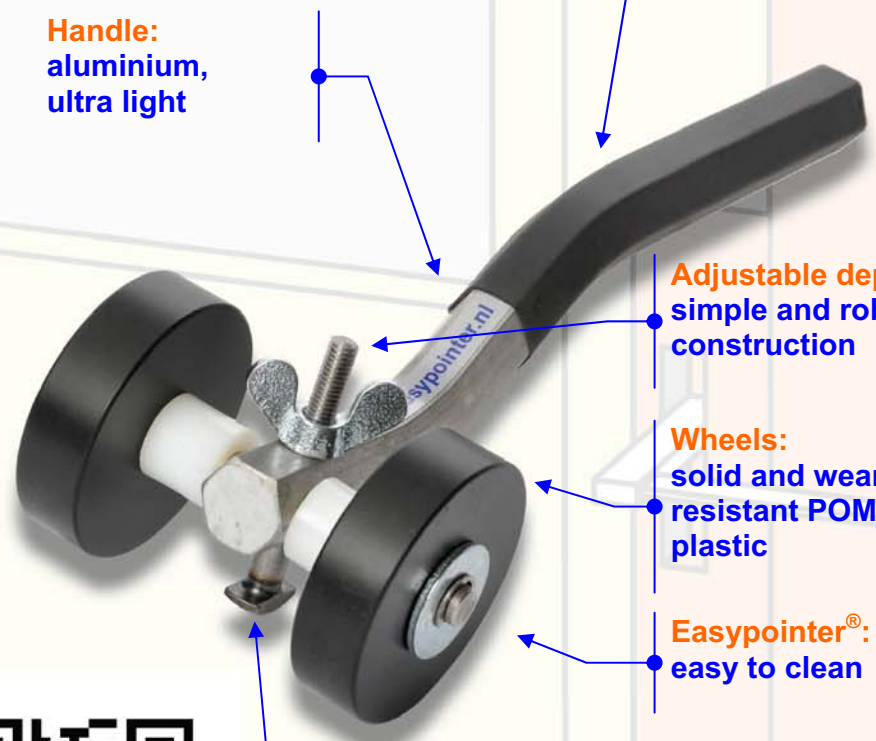

RAKING & SHAPING EXCESS MORTAR IN ONE MOVEMENT

Safety:
adequate distance
from the brick wall

Grip:
ergonomic and
comfortable shape
for maximum grip

Handle:
aluminium,
ultra light

Adjustable depth:
simple and robust
construction

Wheels:
solid and wear-
resistant POM
plastic

Easypointer®:
easy to clean

Pointer pin:
hardened steel,
adjustable depth
of joint,
different widths
available

Easypointer® reduces building time

Raking

Raked mortar joints are the trend of today. This style of brick joint is homogeneous, stronger and better looking. No wonder that architects prefer this joint to concave or extruded styles. With Easypointer® you can reduce time consumption. **Raking & shaping** excess mortar in only one movement.

4,5mm 6mm 7,5mm 9mm 10,5mm 12mm 13,5mm
Width of pointing pin

Adjustable

The Easypointer® has an adjustable pointer pin of hardened steel. It rakes excess mortar out of the joint. In the **same movement** remaining mortar is shaped. The pointer pin can easily be adjusted for joint depths of 0 to 15 mm. It is available in different sizes. The pins vary in width, but also in shape. The Easypointer® comes standard with a 7,5mm wide pointing pin. The number of variations is still increasing, see www.easypointer.nl for an up to date overview.

Advantages

The ergonomic shaped handle of the Easypointer® fits in your hand perfectly. Thanks to its inventive design your hand will always stay on a safe distance of the brick wall. This allows full control on the job and **excellent quality** of brick joints.

The solid wheels are wear-resistant. **Constant depth** of the joint is guaranteed.

The Easypointer® is easy to clean. No additional maintenance is required. Have a good time with this **excellent tool**, job after job.

Last but not least the Easypointer® brings more job **variation** for the bricklayer.

Result

Examine the result of joints which have been raked & shaped by the Easypointer®. New variations of pointing pins are in development, to create special joints. Check www.easypointer.nl

Thanks to the Easypointer® a time saving of 50% can be achieved on the job. Remove your scaffolding earlier. Your bricklayer can start his next job sooner.

In brief: **you gain building time**
